## New York's Queer Anti-Noise A Crusade for More Quiet and Less Din ar Even to the Suppression of Church Bel

New York has many odd societies for the prevention or promo- elevated trains as they sweep along the bo tion of various odd things, and soon there will be an addition to

Among those interested in the success of the list which will endear it to all New Yorkers who try to get as much comfort out of city life as they can.

The new society will be called "The Society for the Prevention of Noise," and is the result of the sen me s voiced by Dr.

J. H. Girdner, of No. 31 West Thirts eighth street, in an ar
"We all remember," said Mr. Smith to

"the objections to this plan, such as the los J. H. Girdner, of No. 31 West Thirty-eighth Street, in an article in a recent number of the Narri) American Review, entitled The Plague of City Noises."

The comment caused by this article, both in America and Europe, is almost incredible. Columns of effitorials on Dr. Girdner's ideas for the prevention of the this ance have been published in the leading English, French, Cerman, Italian, Spanish and Danish journals, while the press of America has taken up the matter most seriously. Dr. Girdner has received letters from all parts of the United States thanking him for his advocacy of the abolition of noises, and many of the writers have offered to ald the society, both by their influence and their money.

It is the intention of the promoters of the society to have introduced in the Legislature a bill for its incorporation this Winter, and if the charter and powers and responsibilities are conferred upon it by that body it will endeavor to co-operate in the suppression of noises with the various city departments, and will, in the first place, make a thorough study of the noises of New York.

Dr. Girdner argues that nearly all the nelses which afflict the residents of a great city can be done away with, such as the noises produced by bells, whistles, clocks, horses, and wheeled vehicles, pediers, beggars, street musicians, cats, togs, horns, explosives and, added to these, are the noises which come from the inside of the houses, such as those made by persons learning to play musical instruments and training the valce

In the first place the society will use its influence toward having all the streets of the city paved with asphalt. The noises made by heavy wagons, such as those used in drawing iron girders, will receive special attention. It is neither a difficult nor expensive matter to put old sacking or burlap be-tween the girders, and once it vere made a violation of the law not to do so, this ear-splitting nuisance would be stopped.

and in a few moments the anial to be used was brought in. It was a interest in what was going on. Soot indicates the name of Spot and belonged to the animos.

When fifteen minutes have clapsed this extended specimen of his ed around the room making of great festivity.

When fifteen minutes have clapsed this of great festivity.

When the band was removed a man or woman of the end up as if he suddenly had begun to take an interest in what was going on. Soot had become very quited.

When fifteen minutes have clapsed this condition was more marked. It was Spot who now was distless an interest in what was going on. Soot had become very quited.

When fifteen minutes have clapsed this great vitality has been used as the subject. For the treatment of many of her patients Dr. Brown uses a strapping Gerpout that become very quited.
